Rapid Precision Manufacturing Medical Solutions

Investor Presentation - February 2026

PLEASANT BAY
CAPITAL PARTNERS

Opportunity Overview

Pleasant Bay Capital Partners is partnering with a 25-year industry veteran and his team to launch RPM, a precision micro-molding platform serving medical device OEMs in a high-barrier MedTech niche.

Micromolding Capabilities

- ✓ Based in Leominster, MA, RPM will offer precision design, design for manufacturing (DFM), tooling, and molding of **micro and small-form components** for regulated medical applications.
- ✓ Integrated **rapid prototyping through full-scale production** in a single facility.
- ✓ Automated, high-precision systems ensuring repeatable **quality and scalability.**

MEDICAL DEVICES ISO ISO 13485:2016 QUALITY MANAGEMENT [1]

Market Need

- Fills supply chain gaps for ultra-precise small-format medical parts where there are currently **only a handful** of established players.
- Delivers **industry-leading turnaround times** versus generalist suppliers.
- Supports OEMs from **early iteration to commercial scale** as a strategic, long-term manufacturing partner.

Areas of Focus

- Catheter Tips
- Implantable Thermoplastics
- Bioabsorbable Devices
- Microfluidics
- Drug Delivery

PBCP is raising $3.3M of equity at a $3.3M pre-money valuation to finance RPM's launch.

[1] ISO 13485 Certification anticipated 3Q26E.

Capabilities Overview

Integrated micromolding capabilities enable RPM to deliver precision components from design through final packaging.

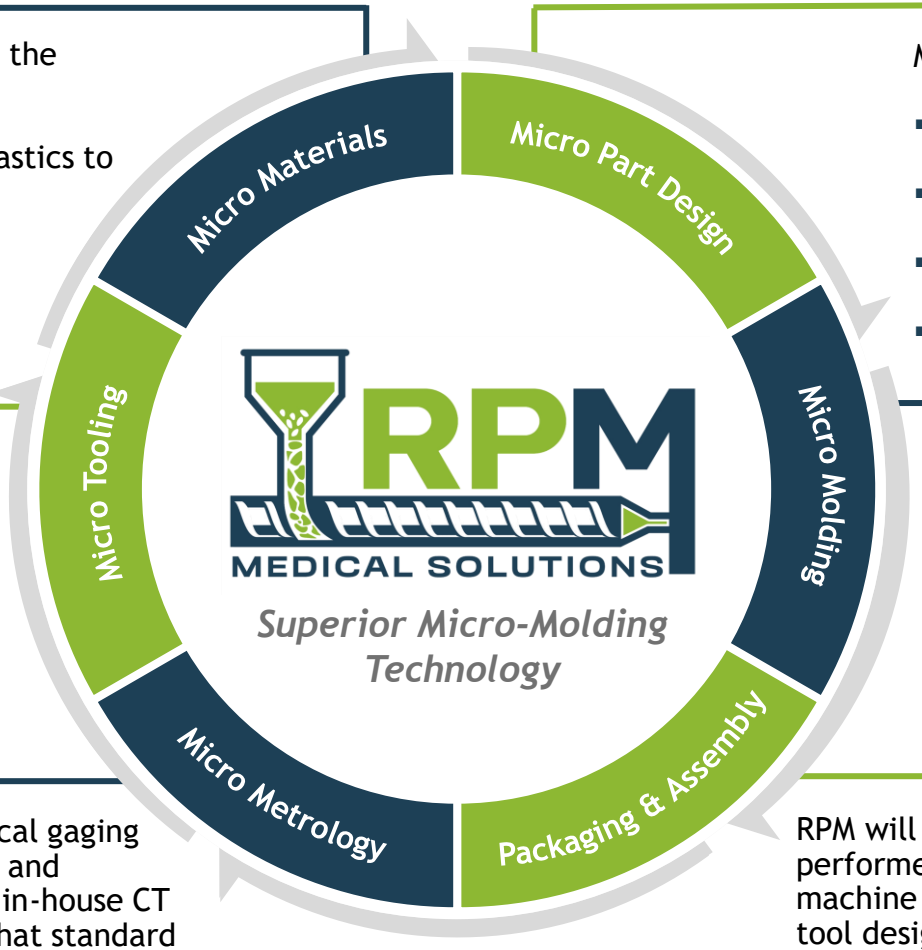
Micro Materials

RPM partners with customers to select the right medical-grade plastics for their applications, offering expertise across bioabsorbable materials and thermoplastics to deliver optimal results.

Micro Part Design

Micro part design features include:

- .004” walls
- R.001” edges / corners
- Ø.002″ holes
- R.0002” radii



Micro Tooling

Ultra-precise tooling enables high-resolution features and superior products, while in-house tooling supports a faster, more efficient development process.

Micro Molding

RPM produces some of the world’s smallest and most precise medical device components, excelling in complex two-shot micro molding and delivering innovations in bioabsorbable and drug-delivery components.

Micro Metrology

Custom fixturing and non-contact optical gaging measurement programs are developed and validated in-house for each part, with in-house CT scanning used to capture dimensions that standard methods can’t.

Packaging & Assembly

RPM will have all assembly and packaging performed in an ISO Class 8 clean room. Every machine is equipped with a custom end-of-arm tool designed for each part to ensure precise, controlled in-line handling, assembly, and packaging.

CONFIDENTIAL

Investment Thesis

RPM represents a unique investment opportunity to build a fully integrated medical micromolding platform designed to scale, with world-class technical expertise, a highly profitable financial profile, and a focus on fast-growing end markets.

Unmatched Leadership Team
Led by a 25-year micromolding veteran and supported by a bench of technical experts, RPM brings deep industry knowledge and proven execution in precision MedTech manufacturing.

Scarce Technical Capability
Micromolding at sub-micron precision is extremely specialized, with only a handful of organizations possessing RPM's expertise.

Attractive Financial Profile & Profitability
Pure-play medical micro-molding generates robust margins at commercial volumes, delivering predictable, high-return economics supported by recurring program-based revenue.

Value-Add Investor Base
Partnership with experienced MedTech operators and industry executives who will actively support business development, strategic hiring, and program wins to accelerate RPM's growth trajectory.

Competitive Moat
Integrated platform, proprietary processes, and expertise in advanced materials such as PEEK and bioabsorbable polymers create barriers difficult for competitors to replicate.

Customer-Focused, Responsive Organization
Single-facility operations and integrated workflows enable fast turnaround times and attentive service, driving repeat business and long-term customer loyalty.

Strategic OEM Relationships
The RPM team has deep connections across MedTech OEMs and will quickly convert relationships into customers.

Favorable Market Dynamics
Micro-molding demand continues to grow alongside MedTech miniaturization trends; U.S. market projected to reach $729M by 2030, growing at 10.7% CAGR.

Attractive Exit Potential
Numerous strategic acquirers in MedTech lack internal micromolding capabilities and are actively seeking platforms like RPM. Recent transactions for similar assets demonstrate the potential for attractive acquisition multiples.

CONFIDENTIAL

Meet the Team

RPM will be launched and led by Gary Hulecki, a micromolding industry veteran with over 25 years of micromolding experience, who will be joined by a deep bench of micromolding experts.

Gary Hulecki – CEO

Gary is a seasoned manufacturing executive with over 40 years of experience in precision tooling and medical micromolding. He joined Miniature Tool & Die (later MTD Micro Molding) in 2001 as employee #4 and played a foundational role in building the company around the emerging demand for miniaturized medical devices. Over two decades, Gary advanced through senior leadership roles including Production Manager, Operations Manager, Executive Vice President, and ultimately CEO in 2022, combining deep technical expertise with disciplined operational execution. In 2022 Gary was named small business leader of the year by the Worcester Business Journal.

Following the unexpected passing of MTD's founder in 2019, Gary assumed full leadership responsibility and led the company through a period of significant growth and stability. Under his direction, MTD expanded its facility footprint, achieved FDA registration for final medical packaging, maintained profitability with over $3 million in adjusted EBITDA, and grew revenue by more than 40%. His track record of scaling highly regulated manufacturing operations, driving profitability, and sustaining world-class quality standards forms the operational backbone of RPM Medical Solutions.

Zachary Hulecki – Sales / Marketing / Business Development

Zachary began his career in advanced medical manufacturing in 2013 at age 16 at MTD Micro Molding, gaining hands-on experience across CNC machining, mold maintenance, tooling, and high-precision production environments. Over a decade at MTD, he progressed from the shop floor into mold design and end-of-arm tooling (EOAT) design, working on projects requiring extreme tolerances and innovative engineering solutions. In parallel, Zachary earned a Bachelor's degree in Mechanical Engineering from the University of New Hampshire, allowing him to directly integrate engineering theory with real-world medical device manufacturing applications.

In addition to his technical background, Zach brings disciplined leadership experience from the U.S. Army National Guard, where he enlisted in 2016 and later commissioned as an Army officer through ROTC in 2021. His combined experience in regulated manufacturing environments, engineering execution, and military leadership equips him to drive operational excellence, engineering strategy, and scalable execution at RPM Medical Solutions, supporting the company's mission to deliver world-class micromolding and tooling solutions to the medical device industry.

Global Disposable Medical Device Market

The Global Disposable Medical Device Market is projected to grow rapidly over the next several years due to numerous market tailwinds, creating significant opportunity for RPM.

Market Tailwinds

Rise in Geriatric Populations

- The world's elderly population (age 60+) is expected to increase from 14% to 22% of the world population between 2025 and 2050.

Increase in Chronic Diseases

- Of the population 50 years and older, the number with at least one chronic disease is estimated to increase by 78.5% from 81.3 million in 2025 to 142.66 million by 2050.

Surge in Demand for Quality Care

- Demand for quality care is increasing alongside the rising population age.
- Healthcare spending in the United States totaled 18.5% of gross domestic product (GDP) in 2025.

Expanding Catheter Technology Use

- Catheter-enabled diagnostic technology is increasing in capabilities and broadening in use.
- Growing focus on patient comfort and safety increases emphasis on procedures being as minimally invasive as possible.

Outsourced Device Manufacturing Market Overview

The Outsourced Device Manufacturing Market has been on an upward trajectory and is expected to reach a value of +$150 Billion by 2030.

Factors Driving Outsourcing Demand

- **Permanent Pursuit of Cost Savings and Operational Efficiency** to free resources towards their core competencies.
- **Increasing Tendency to Outsource Higher-Value Phases** such as product design, engineering, or complex manufacturing.
- **Competency Gaps in Certain High-Growth Domains of Innovation** traditionally outside of the OEM's capabilities.
- **Strong Growth of End Markets that Already Exhibit a High Degree of Outsourcing** such as robotics, structural heart, and wearable devices.
- **Efficient Manufacturing and Quicker Production To Enable OEMs** to capture economic benefits.

Micro Injection Molding Market Overview

Micro injection molding is a rapidly expanding, high-precision manufacturing market driven by medical device demand and ongoing advances in materials and process automation.

Market Tailwinds

Medical Sector Demand

- The medical sector is a key growth driver due to rising minimally invasive procedures and demand for bioabsorbable devices. Higher healthcare spending, especially in the U.S. and Asia-Pacific, further supports growth.

Minimally Invasive Procedures

- The increasing clinical adoption of minimally invasive procedures creates high demand for extremely small, high-precision components. Micro injection molding is essential for producing these devices.

Disposable Device Demand

- There is a growing need for disposable medical products to ensure safety and hygiene. Micro injection molding is used extensively to produce high volumes of these precise components, such as catheters.

Technological Advancements

- Innovation in machinery and material science is accelerating market growth. Advancements in micro injection molding technology and automation, enable manufacturers to produce increasingly complex geometries.

Financial Overview

Commentary

- **Rapid Revenue Growth:** Revenue is projected to exceed $12M by 2030E as early-stage prototyping programs convert into high-volume molding and tooling production.
- **Best-in-Class Gross Margins:** Scaling to production operations is expected to drive meaningful manufacturing efficiencies and gross margins approaching 60%.
- **Significant Operating Leverage:** The highly scalable business model supports EBITDA margins of ~37% at maturity.
- **Clear Path to Profitability:** The team's deep industry relationships and robust pipeline of programs positions the business to achieve positive EBITDA in 2028.

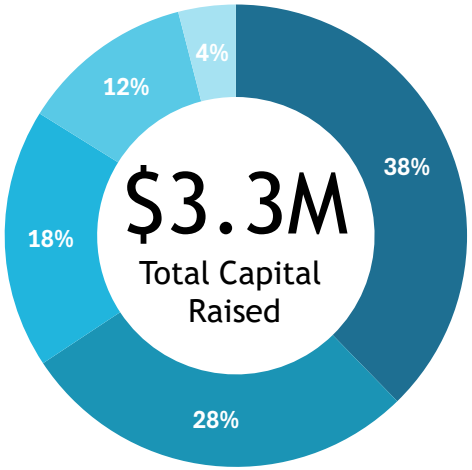
Uses of Capital

Capital will be used to fund operating ramp-up and invest in tooling, molding equipment, and facility build-out.

Uses of Capital



= Operating Losses
= Tooling Equipment
= Molding Equipment
= Facility Build Out
= Startup Costs

Operating Losses - $1.24M
- Capital needed to fund operational ramp-up to profitability.

Tooling Equipment - $924K
- Includes purchases of and down payments on tooling equipment and machinery.

Molding Equipment - $599K
- Includes purchases of and down payments on molding equipment and machinery.

Facility Build Out - $400K
- Includes initial facility conversion items.

Startup Costs - $133K
- Includes ISO registration, legal fees, and other.
